# **VERTICAL STAMPING**

C A T A L O G U E 2 0 1 5

Flexstone is a decorative concrete system with a unique technology developed in India by a group of young and driven entrepreneurs. Understanding the need of the designers & the evolution of the construction industry, a new culture, "Cladding Culture" is developed by Flex Stone Inc.

Inspired by nature and its splendid beauty, FlexStone offers a wide range of modern and classical cladding options. These are the result of our continuous innovation through research and product development.

Vertical Stamping offers a wide variety of modern and classical application options indoors and outdoors on almost any existing surface. It enables the creation of a wide variety of designs and textures to provide the user with custom application.

This product makes it possible to create various architectural details such as columns, arches, frames, beams and other elements. Imagination is the only limiting factor for Vertical stamping applications. Indoors and outdoors, Vertical Stamping applications can be done with little or no preparations. Even in tight spaces, a new look can be achieved with overlays as little as 1 or 2 centimeters thick.

ADVANTAGES

## ADVANTAGES OF VERTICAL STAMPING

---

- It offers easy and faster installation, is light in weight as well as maintains natural look and feel.
- It is one-piece application with no joints and it does not create a habitat for weeds and insects.
- This light weight material can be applied in high structures without any limits.
- Durable, as permanent as the subsurface applied upon.
- Does not separate, fall, or break when applied properly.
- This product is antibacterial.
- UV resistant colors.
- Test proven fire resistant qualities.
- Excellent insulation qualities. Effective in controlling moisture related problems.
- Freeze-thaw resistant and suitable for extreme climates both hot and cold.

# TRENDS

Vertical Stamping is very suitable for one of a kind and unique application; it is also a perfect choice for designers to use this product in houses, restaurants, hotels, clubs, showrooms and other such suitable areas.

# APPLICATION

## APPLICATION PROCESS

1. Application of Primer 100 on the surface to ensure durable installation.
2. Application of 10mm–12mm of wall mix on the desired wall.
3. Imprinting the desired texture and material on the wall surface with polyurethane stamps.
4. Once the material is dry, grouting and colouring is done on the wall to achieve desired finish.
5. Finally, the top coat sealer is applied on the stamped wall.
